

Welcome to five hundred years
of European printing history!

For half a millennium, German language publications were printed in a distinct typeface called German Blackletter or Fraktur (pronounced frac-toor) Like so many other traditions, Fraktur printing and writing fell into disuse over time and has long been forgotten.

Today, printers and type designers in Germany and in the World are re-discovering the beauty of Fraktur.

At Walden Font, we have studied the ancient art of Blackletter printing and are proud to present a carefully researched collection of eighteen of the most beautiful Fraktur printing and handwriting fonts, beginning with the font that Johannes Gutenberg used to print his famous 42-line bible, the first book ever to be printed with movable letters.

The Gutenberg Press takes you on a fascinating journey through the history of German printing. Each of our fonts is a milestone in the evolution of printing, our illustrated manual explains the origin of each font and the way it was used. Ancient and modern examples round out the presentation.

We invite you to discover for yourself this new, old, beautiful way of putting thoughts on paper - order the Gutenberg Press today!.
